

As part of Colorado's Transparency Online Project, and the process to update the Statewide Water Supply Initiative (SWSI), the Colorado Water Conservation Board is opening the HB10-1051 data for research purposes to foster innovation. Colorado's water future is uncertain and a broader dissemination of water use and water conservation data will support more research arenas in defining and implementing solutions to the statewide water supply-demand gap.

DISCLAIMER:

The purpose of the HB10-1051 data reporting, per Section 37-60-126(4.5)(a), C.R.S., is to provide water use and conservation data for statewide water supply planning. The data collection process is designed to provide better, more frequent, and more reliable data than currently available through standardized reporting requirements by each covered entity as defined in the HB10-1051 Guidelines. However, this does not necessarily standardize the data collection process and does not require entities to change their data/billing systems to report in a particular format.

While the Colorado Water Conservation Board makes every attempt to verify the submitted data, data handling errors occur. The Colorado Water Conservation Board does not manipulate the submitted data but simply makes this data available "as-is". The Colorado Water Conservation Board and/or Colorado Department of Natural Resources shall not be held liable for improper or incorrect use of the data described or information contained on these pages. These data, information, and related tables are not legal documents and are not intended to be used as such. The user should exercise caution in using the data without a proper QA/QC process and without understanding the context from which the submitted data originates. The Water Efficiency Data Portal supports the annual reporting process and allows covered entities to describe data collection and preparation metadata, as well as any cases where certain definitions in these Guidelines are not directly applicable. The statewide and basinwide planning efforts are not intended to replace water conservation, water resource planning, nor projections prepared by local entities for project-specific purposes. These data alone are not intended to be used to provide comparisons between utilities.

Water Efficiency Data Portal Instructions:

First-time Users

- Email the Data Portal Administrator at cwcb.wedp@gmail.com for creating an account and login
- Sign in and select "Download Data" from the top menu and follow the instructions there
